INDUSTRY BENCHMARK COMPARISON

SuA Glow Actuals vs. Standard Medical & Aesthetic Clinic Benchmarks

METRIC	SUA GLOW ACTUAL	INDUSTRY BENCHMARK	PERFORMANCE ASSESSMENT
Click-Through Rate (CTR)	11.16%	3.8% – 4.5%	OUTSTANDING (+160% vs. industry average)
Average Cost Per Click (CPC)	\$1.81	\$4.50 – \$7.20	EXCELLENT (-60% lower than DFW market)
Ad Strength Coverage	100% 'Good'	Average / Mixed	OPTIMAL (15 headlines & 4 descriptions)
Targeting Efficiency	100% Search Only	Display Expanded (Diluted)	ZERO-WASTE (13 DFW cities with presence)

PERFORMANCE BY AUDIENCE SEGMENT (AD GROUPS)

Real traffic distribution, click-through rates, and cost efficiencies by target persona

AD GROUP	IMPR.	CLICKS	CTR	AVG. CPC	SPEND	KEY INSIGHT
Ad Group 2: Thinning / Women	121	14	11.57%	\$1.61	\$22.50	Top Performer: Lowest CPC & highest volume
Ad Group 1: Combined / Hair Loss	110	12	10.91%	\$1.99	\$23.92	High clinical intent ("Korean hair treatment")
Ad Group 3: Hairline / Men	11	1	9.09%	\$2.32	\$2.32	Newly activated; gaining auction momentum
Campaign Total	242	27	11.16%	\$1.81	\$48.74	High-efficiency patient acquisition funnel

KEY STRATEGIC TAKEAWAYS FOR CLIENT

- 1. Exceptional Ad Copy Resonance (11.16% CTR)**
An 11.16% Click-Through Rate is nearly 3x higher than standard Google Search benchmarks. This confirms that front-loading the \$399 Korean Scalp Reset pricing and physician-guided positioning strongly resonates with local Dallas medical aesthetic seekers.
- 2. Substantial Cost Advantage (\$1.81 Average CPC)**
In the highly competitive Dallas medical and hair restoration sector, typical search clicks range from \$4.50 to \$7.50+. Achieving a \$1.81 CPC allows SuA Glow to drive maximum qualified clinic traffic at less than half the expected market cost.
- 3. Female Thinning Leading Early Engagement**
Ad Group 2 (Thinning / Women) is generating the highest volume and lowest cost-per-click (\$1.61 CPC, 11.57% CTR). This highlights an immediate high-intent market of women seeking non-surgical, needle-free solutions for widening thinning hair.
- 4. Pure High-Intent Search Protection**
By disabling Google Display Expansion and enforcing 22 negative keywords, 100% of the \$48.74 spent to date was dedicated exclusively to active local searchers with zero ad spend wasted on mobile games or out-of-market consumer intent.

REAL PATIENT SEARCH QUERIES DRIVING CLICKS

Exact high-intent Google search phrases entered by prospective patients in North Texas

CAMPAIGN SAFEGUARDS & WASTE PREVENTION PROTOCOLS

Multi-layer governance protecting ad spend and preserving brand clinical integrity

22 Strategic Negative Keywords Shield Strictly prevents ad impressions and click charges from non-clinical, surgical, or low-ticket searches: • Surgical Procedures: transplant, hair transplant, FUE, FUT, Turkey • Cosmetic Wigs & Hairpieces: wig, toupee, extensions • Standard Salon / Barbershop: haircut, hairstyle, shampoo, conditioner • E-Commerce / DIY: Amazon, DIY, home remedy, free • Employment & Courses: jobs, career, school, certification, course, training	Active at Campaign Level
Display Expansion Disabled (100% Google Search) Google Display Network expansion is intentionally turned OFF. This prevents budget dilution into low-value mobile apps, accidental clicks, and third-party gaming banners. Every single dollar of the \$40/day budget is dedicated purely to	Budget Protection Verified
Strict 'Presence' Location Matching Location targeting is configured to 'Presence: People in or regularly in your included locations' rather than the default 'Presence or Interest'. This guarantees that users merely browsing from outside Texas cannot trigger ads or deplete d	Zero Out-of-State Bleed

STRICT 'PRESENCE' GOVERNANCE

Zero Out-of-State Budget Bleed

Google's default setting ('Presence or Interest') shows ads to anyone researching Texas from California or overseas. S

ONGOING CAMPAIGN OPTIMIZATIONS & NEXT STEPS

Immediate: Negative Keyword Scrubbing ('Aveya')

Search terms identified queries like 'aveya hair growth spray.' While hair-related, Aveya is a retail topical product. Adding 'aveya' to the negative list prevents retail brand bleed and preserves 100% of budget for clinical procedure seekers.

Days 3 – 7: Algorithm Calibration & Smart Learning

Google's Maximize Clicks bidding engine is in its initial learning phase. Performance is accelerating (Day 2 CTR rose to 17.74% while CPC decreased to \$1.28). We will monitor daily search queries without disrupting machine learning.

Days 8 – 14: Conversion Signal Attribution & Scaling

As prospective patients begin booking consultations and calling 972-665-8737, we will verify direct conversion tracking in Google Ads to monitor exact Cost-Per-Lead (CPL) across all 3 audience segments.

Days 15 – 30: Transition to Target CPA (Cost-Per-Acquisition)

Once the campaign accumulates 30–50 verified patient inquiries, we will transition bidding to Target CPA. This enables Google's AI to automatically bid aggressively on searchers with the highest likelihood of booking.
